

Science, art and gastronomy: Bosque Masía Bellver prepares a unique experience around the solar eclipse of 12 August

- The event is conceived as an experience designed to connect with the surroundings
- Talks with experts, live screening of the eclipse, live music and performances shape the cultural programme

Oropesa del Mar (Castellón), 5 August 2026. Bosque Masía Bellver is preparing a unique experience around the total solar eclipse on 12 August, one of the most eagerly awaited astronomical events of the century. Castellón, chosen by Spain's Centre for Sociological Research (CIS) as the country's favourite destination to watch it, has not experienced an eclipse of this kind since 1905 and will not do so again until the next century. The experience will combine science communication, art and gastronomy in a setting surrounded by Mediterranean vegetation, facing the sea.

Part of the Bellver Blue Tech Zone ecosystem, this natural enclave goes beyond conventional leisure formats to establish itself as a meeting point focused on holistic wellbeing, innovation and community. Following this philosophy, the eclipse event is conceived as an experience designed to connect with the surroundings, share the immensity of the universe and recover the capacity for wonder.

The day's programme will begin at 5:00 p.m. with the opening of doors and a talk given by Fundación Azul Marino. After a DJ set to set the atmosphere, several screens will make it possible to follow the eclipse live from 7:37 p.m. The high point will come at 8:31 p.m. with a complete stop in the music, giving way to ninety seconds of total darkness; a brief passage of silence in the middle of nature that invites contemplation and connection with the sky.

Once the total phase is over, the light will return alongside an iconic musical remix, leading into a performance by Academia Tempo Castellón and a live concert by the band Sin Bikini. This cultural programme will be complemented by a gastronomic offering and themed beers, rounding off a day in which the

forest offers both shelter and spectacle.

For those who wish to extend this unique experience, the event offers different access options, including packages with accommodation at Hotel Masía Bellver. Guided astronomical observation is thus part of a restful weekend, where the contemporary design of the rooms and the calm of the outdoor pool complete the Bellver Blue Tech Zone proposal. It is an invitation to enjoy the coast without rushing, strengthening that community in motion that finds in this refuge the perfect balance between nature, technology and personal care.
