

PRESS RELEASE

A perfect space where nature sets the pace

Oropesa del Mar (Castellón), June 2026. Some places are simply lived. Bosque Masía Bellver is one of them. Set between Benicàssim and Orpesa, facing the sea, this enclave redefines what it means to take care of yourself through nature. A space where calm is not sought after, but arrives on its own, and where integral wellbeing makes sense in direct contact with the surroundings.

Bosque occupies an area of high ecological value, where the Mediterranean forest merges with the coastline. The result is a singular setting that blends into the landscape without altering it, proving that human activity and the preservation of biodiversity can not only coexist, but complement one another.

Bosque's proposal is built around an active community that finds here the ideal setting to connect body and mind. Wellbeing talks, yoga, pilates and barre sessions and string concerts among the pines make up a programme designed for those who understand leisure as a form of care. All of it in a format that avoids rigidity, with a schedule that evolves, adapts and breathes at the same pace as its surroundings.

What distinguishes this community is not only what it does, but how it does it, with activities conceived to be shared. Every session is an opportunity for people who share the same way of understanding life, free time and self-care to come together.

Gastronomy plays a central role in the experience. Bosque's restaurant offers fresh Mediterranean cuisine, prepared with seasonal produce that speaks of the territory. All of it following the same philosophy: enjoying, consciously, what the surroundings have to offer.

Bosque is part of the Bellver Blue Tech Zone ecosystem, a place where wellbeing, sustainability, innovation and nature coexist in balance. Its philosophy stems from one essential premise: the best way to understand, respect and preserve the environment is to be part of it. That is why every space, experience and project within this area connects people, territory and technology, bringing together tradition and innovation in a single Mediterranean ecosystem.
